

JN BALDER Y702

A true curve bender bull that has been a favorite among many breeders. He is one of the higher accuracy EPDs bulls in the breed. He produces for the most part calves that are black to the ground with a white face and goggle eyes. His phenotype is exceptional, and calves sired by him have outstanding growth. He maintains a moderate birth weight that is acceptable for heifers. We have used him heavily in our own herd and have been tremendously happy with the success we have had. He adds tremendous power to his offspring. We feel he is overall one of the most complete packages in the breed.

Reg. HB002447
